

aloft

Aloft™ is a unique height-adjustable benching solution designed for a modern open space plan. A best of NeoCon award winner, this new product platform combines the features and functionality of a bench system with the ergonomic and documented health benefits of standing while working.

Worksurfaces are offered at fixed height, manual crank adjustable or with a fluid programmable motorized option. Screens have been engineered for fixed height use or can be mounted to the adjustable surfaces creating concealed work areas at virtually any height.

Aloft has been thoughtfully designed for use beyond traditional forward-facing benching. Return surfaces can receive power and data, creating multipurpose work areas.

Aloft is designed to grow with your worker's needs and budget. This benching system has been designed to support both fixed height and height adjustable spaces within one platform. Fixed height Aloft can be easily upgraded in the future to height-adjustability, further securing your investment.

This thoughtfully designed benching platform is engineered for the evolving workplace.
